DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 20, drawn to a method and computer program for defining a route for a net in a layout with multiple routing layers and a plurality of segments that includes adaptively defining a shape based on available routing directions classified in class 716 subclass 12.
 - II. Claims 21 - 46 drawn to a method and computer program for defining a route in a layout with multiple routing layers and a plurality of segments that includes defining an unroutable bloated region about a previously defined geometry, wherein that region for two or more different routing directions are different, classified in class 716 subclass 12.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has a separate utility such as a method for defining a route for a net in a layout that includes adaptively defining a shape based on routing directions available on a routing layer; and invention II has a separate utility such as a method for defining a route for a net in a layout that includes defining an unroutable bloated region about a previously defined geometry

Art Unit: 2825

such that the bloated region for two or more routing directs are different. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Groups I and II are distinct, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2825

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
